Marabu: Decorative and functional printing at K 2013

[Print](#)

K-Fair 2013, hall 4, booth B58. From 16 to 23 October, Marabu will be showcasing its extensive portfolio of printing inks at K 2013 in Düsseldorf, Germany – the world's largest trade fair for plastics. Marabu will present a wide variety of applications, both decorative and functional, for its range of screen, digital and pad inks, and liquid coatings. What's more, visitors can expect some exciting live demonstrations and discover the latest developments in the Innovation Zone. At K 2013, the focus will be on innovative industrial and graphical applications in screen, digital and pad printing. Marabu is this year focusing on the UV LED curable UltraJet DLE-A range and the conventionally cured UltraJet DUV-A line. Both are available in one-litre containers and cartridges for Mimaki, and are suitable for use with rigid materials such as acrylic glass, hard PVC, aluminium sandwich panels (e.g. Dibond®), polycarbonate or polypropylene, as well as flexible substrates such as self-adhesive film or sheeting made from soft PVC. Because UV LEDs do not emit infra-red light, practically no heat is generated – making UltraJet DLE-A an excellent choice for sensitive substrates.
